PORTFOLIO

AssistU | Live Site | <code />

- Lead designer, project manager, scrum master, and full-stack developer built AssistU a booking system for on-demand household and personal services on a fully distributed development team.
- Full-stack web application designed with Bootstrap and deployed with Heroku, engineered with NodeJS, Express, and PassportJS, which utilizes MongoDB and Mongoose for storing data and database management.

Where it Matters | Live Site | <code />

- React application that connects to the ORGHunter Charity API, designed with Materialize, CSS, HTML.
- Hackathon application project manager, wireframe designer and front-end developer responsible for creating the component views and application routing.

Family Cookbook Manager | Live Site | <code /> | <API code />

- Solo project built using NodeJS with a Handlebars view layer. Extracted Handlebars view layer into a React application styled with Materialize and refactored the Node application into an API that responds to requests with JSON data.

Gibraltar Sales Group | Live Site

- Front-end developer transposed Adobe Illustrator mockup design into a multi-page WordPress site engineered with HTML and CSS.

Rugs of All Nations | Live Site

- Assisted as front-end developer to transform customer-designed Adobe Illustrator mockup into a complex multi-page website, including parallax slider. Engineered with HTML and CSS.
